

Use these commands to set up the operating configuration of your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS AND PLACE THE SELECTED UNIT UNDER COMPUTER CONTROL:		
ADR [cr]	read the address of the selected unit	nn [If] <i>Use this QUERY command if your installation has two or more 600/620s</i>
#nn [cr]	select the 600/620 ADDRESS	[no reply]
IFS [cr]	request INTERFACE STATUS	LCL [If], RMT [If], or RSR [If] <i>Control is either from the Front Panel ("LCL") or from your computer ("RMT" or "RSR")</i>
RMT SELECT [cr]	change to REMOTE mode (computer control)	ok [If] <i>To transfer control back to the 600/620 Front Panel, use the command LCL [cr]</i>
RSR SELECT [cr]	change to EXTERNAL RAMP SOAK (computer control)	ok [If]
2 USE THE FOLLOWING COMMANDS TO READ INFORMATION ABOUT THE SELECTED UNIT:		
CRM [cr]	read CONTROLLER MODE	xxx...xxx [If] <i>Response to this query command is a character string "xxx...xxx" from one of the following: DUAL; SINGLE; PASSTHRU; FASTRAC</i>
FRE [cr]	read FREE MEMORY	nnn [If] <i>Response to this command "nnn" is the number of STEPS available (200, max)</i>
MOD [cr]	read PROGRAMMER MODE	xxx [cr] <i>Response to this command "xxx" is one of the following: STP (stop); RUN; or PAU (Pause)</i>
PFA [cr]	read POWER FAIL RECOVERY ACTION	xxx...xxx [If] <i>Response "xxx...xxx" is one of the following: NO_ACTION; HOLD; or RUN</i>
I8A [cr]	read #8 INPUT JUMP CONDITION	xxx...xxx [If] <i>Response to this query command is a character string "xxx...xxx" from one of the following: NO_ACTION; RUN</i>
STA [cr]	read STATUS OF PROGRAMMER	xxx [If] <i>Response "xxx" is one of the following: RUN; STP (stop); PAU (Pause); EOP (End of Program); PWF (Power Fail); GS1 (Guaranteed Soak Ch1); GS2</i>
VER [cr]	read FIRMWARE VERSION	nnn [If] <i>Response "nnn" is version n.nn ; ie "156 [If]" is version 1.56</i>
DAT [cr]	read DATE of Firmware Revision	mm/dd/yy [If]
SYN [cr]*	read STATUS OF SYNCHRONIZER MODE	x [If] <i>Response "x" is one of the following: "1" = ON, "0" = OFF</i>

continued on next page 

* Note: Sync must be OFF unless 600A/620A is being used as part of a multi-unit synchronized system!

Use these commands to set up the operating configuration of your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
3 USE THESE COMMANDS TO CONFIGURE THE SELECTED UNIT: (NOTE: SEND COMMAND W/O DATA TO READ CURRENT VALUE)		
ALT nnn [cr]	select SITE ELEVATION (altitude, in feet)	ok [If]
CH1 M [cr]	select MANUAL MODE for Channel 1 <i>Use "CH2 M" to select Manual Mode for Channel 2</i>	ok [If]
CH1 P [cr]	select PROGRAMMER MODE for Channel 1 <i>Use "CH2 P" to select Programmer Mode for Channel 2</i>	ok [If]
FTH nnn [cr]	set the FastTRAC HI TEMP setpoint limit <i>This value establishes the upper setpoint for chamber air temperature</i>	ok [If]
FTL nnn [cr]	set the FastTRAC LO TEMP setpoint limit <i>This value establishes the lower setpoint for chamber air temperature</i>	ok [If]
HL1 nnn [cr]	set HI PROCESS LIMIT for Channel 1 <i>Use "HL2 nnn" to set Hi Process Limit for Channel 2</i>	ok [If]
HS1 nnn [cr]	set HI SPAN LIMIT for Channel 1 <i>Use "HS2 nnn" to set Hi Span Limit for Channel 2</i>	ok [If]
I8A N [cr]	set #8 Input Jump Condition to NO ACTION <i>This is the Normal (default) condition</i>	ok [If]
I8A R [cr]	set Input #8 Jump Condition to RUN <i>Follow this with command defining Program to be run (see next)</i>	ok [If]
I8P nn [cr]	set PROGRAM NUMBER to run if Jump is executed <i>Follow this with command defining Step of Program (see next)</i>	ok [If]
I8S nnn [cr]	set STARTING STEP in Selected Program if Jump is executed	ok [If]
LL1 nnn [cr]	set LOWER PROCESS LIMIT for Channel 1 <i>Use "LL2 nnn" command to set Lower Process Limit for Channel 2</i>	ok [If]
LP1 nn [cr]	set LOW PASS FILTER for Channel 1 <i>"nn" is Tau value in seconds; use "LP2 nn" command to set Low Pass Filter for Channel 2</i>	ok [If]
LS1 nnn [cr]	set LOW SPAN LIMIT for Channel 1 <i>Use "LS2 nnn" to set Low Span Limit for Channel 2</i>	ok [If]
PF1 nnn [cr]	set the POWER FAIL Process Change Limit for Channel 1 <i>Use "PF2 nnn" command to set the Power Fail Process Change Limit for Channel 2</i>	ok [If]
PFP nn [cr]	set POWER FAILURE PROGRAM Number	ok [If]
PFS nnn [cr]	set STARTING STEP in Selected Power Fail Program	ok [If]
UN1 nnn [cr]	set UNITS for Channel 1 <i>"nnn" is one of the following: F-Degrees-F; C-Degrees-C; RH-RH/WB; LIN-Linear</i> <i>Use "UN2 nnn" command to set Units for Channel 2</i>	ok [If]
SYN n [cr]*	set SYNCHRONIZER MODE <i>Use "SYN 1" to turn ON the Synchronizaer mode</i> <i>Use "SYN 0" to turn OFF the Synchronizaer mode</i>	ok [If]

* Note: Sync must be OFF unless 600A/620A is being used as part of a multi-unit synchronized system!

Use these commands to Create, Modify or Review programs stored in your 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
---------	----------	-------

1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS AND PLACE THE SELECTED UNIT UNDER COMPUTER CONTROL:

ADR [cr] read the address of the selected unit	nn [If] <i>Use this QUERY command if your installation has two or more 600/620s</i>
#nn [cr] select the 600/620 ADDRESS	[no reply]
IFS [cr] request INTERFACE STATUS	LCL [If] or RMT [If] <i>Control is either from the Front Panel ("LCL") or from your computer ("RMT")</i>
RMT SELECT [cr] change to REMOTE mode (computer control)	ok [If] <i>To transfer control back to the 600/620 Front Panel, use the command LCL [cr]</i>

2 IF YOU ARE GENERATING A NEW PROGRAM, START WITH THIS COMMAND AND THEN GO TO ITEM 4 BELOW:

FRS nn [cr] insert the FIRST STEP of a new program	ok [If] <i>"nn" is the number of the new program</i>
--------------------	--	---

3 IF YOU WISH TO EDIT AN EXISTING PROGRAM, START BY SELECTING THE DESIRED PROGRAM AND STEP THEN GO TO ITEM 4 BELOW:

PRN nn [cr] select PROGRAM number	ok [If] <i>To READ the current program number, just enter PRN [cr]</i> nn [cr]
STN nnn [cr] choose the STEP number in the selected program	ok [If] <i>To READ the current STEP number, just enter STN [cr]</i> nnn [If]

4 USE THESE COMMANDS TO EDIT THE TYPE OF THE SELECTED STEP, THEN GO TO ITEM 5 BELOW:

TYP [cr] QUERY type of selected step	TYP [If] <i>Response will be one of the following: STD, EOP, LOP, GTO, GTI or PAU</i>
TYP S [cr] define selected step as STD (Standard = RAMP/SOAK)	ok [If]
TYP E [cr] define selected step as EOP (End of Program)	ok [If] <i>If your program calls for multiple cycles, follow this command with the LOP command (see below)</i>
TYP L [cr] define selected step as LOOP	ok [If] <i>Immediately follow this command with the LOP command (see next)</i>
LOP cccc sss [cr] LOOP from the selected step, a total of cccc cycles back to step sss ..	ok [If]
TYP G [cr] define selected step as GTO (Go To - Unconditional)	ok [If] <i>Immediately follow this command with the GTO command (see next)</i>
GTO pp sss [cr] directs the controller to JUMP to Program "pp", Step "sss"	ok [If]
TYP I [cr] define selected step as GTI (Go To -IF)	ok [If] <i>Immediately follow this command with the GTI command (see next)</i>
GTI pp sss x [cr] directs the controller to JUMP to Program "pp", Step "sss" IF "x" is true	ok [If] <i>"x" may be any event ("1" thru "8" or "A" thru "H") or "0" for Input #4</i>
TYP P [cr] define selected step as PAUSE	ok [If]

continued on next page ➡

IEEE488 OPTIONS

Refer to the back cover of this guide for a listing of additional IEEE488 instructions.

Use these commands to Create, Modify or Review programs stored in your 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
---------	----------	-------

5 USE THESE COMMANDS TO COMPLETE THE DETAILS FOR THE SELECTED STEP. (NOTE: SEND COMMAND W/O DATA TO READ CURRENT VALUE)

AL1 nn [cr]	set DEVIATION ALARM for Channel 1 (use "AL2" for Ch2)	ok [lf]
DEP [cr]	DELETE the selected PROGRAM	ok [lf]
DES [cr]	DELETE the selected STEP	ok [lf]
CL1 [cr]	CLEAR the Channel 1 SETPOINT for the selected step (use "CL2" for Ch2)	ok [lf]
EVC [cr]	CLEAR all the EVENTS for the selected step	ok [lf]
EVD [cr]	set ALL the EVENTS for the selected step to DON'T CARE state	ok [lf]
EVF n n [cr]	set selected EVENTS to OFF (e.g. EVF 1 3 A H [cr])	ok [lf]
EVN n n [cr]	set selected EVENTS to ON (e.g. EVN 2 4 B G [cr])	ok [lf]
EVS 1•3••6••A••D•X•H [cr]	EVENT STATUS (read or store image)	ok [lf]
EVX n n [cr]	set selected EVENTS to DON'T CARE (e.g. EVX 2 5 C [cr])	ok [lf]
GS1 nn [cr]	set GUARANTEED SOAK for ch1 (use "GS2" for ch2)	ok [lf]
SS1 nnn.n [cr]	establish SETPOINT for Channel 1 (use "SS2" for Ch2)	ok [lf]
STM hh mm ss [cr]	set TIME for step <i>Enter hours as "00" if time less than 1 hr; You may also enter this command as STM hh:mm:ss [cr]</i>	ok [lf]
TBD nn [cr]	set thermal boost decrease	ok [lf]
TBI nn [cr]	set thermal boost increase	ok [lf]

6 IF YOU ARE CREATING A NEW PROGRAM OR ADDING STEPS TO AN EXISTING PROGRAM, USE THIS COMMAND THEN RETURN TO ITEM 4 ABOVE:

INS [cr]	INSERT a BLANK STEP immediately following the selected step <i>All subsequent commands will apply to the NEW step</i>	ok [lf]
-----------------	--	---------

7 USE THIS COMMAND TO RETURN THE SELECTED 600/620 CONTROLLER TO FRONT PANEL OPERATION:

LCL [cr]	place selected unit under LOCAL control (front panel)	ok [lf]
-----------------	---	---------

IEEE488 OPTIONS

Refer to the back cover of this guide for a listing of additional IEEE488 instructions.

Use these commands to monitor the current information in your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS:		
ADR [cr]	read the address of the selected unit	nn [If] <i>Use this QUERY command if your installation has two or more 600/620s</i>
#nn [cr]	select the 600/620 ADDRESS	[no reply]
2 USE THESE COMMANDS TO REQUEST SET UP INFORMATION FROM THE SELECTED 600/620 CONTROLLER:		
IFS [cr]	request INTERFACE STATUS	LCL [If] or RMT [If] <i>Response will be "LCL" if selected unit is under front panel control; "RMT" if under computer control</i>
CH1 [cr]	request Channel 1 CONTROLLER MODE	PRG [If] or MAN [If] <i>Response will be "PRG" if Ch1 setpoint is under programmer control; "MAN" if under manual control Use command "CH2" to request Channel 2 Controller Mode</i>
UN1 [cr]	read UNITS of Channel 1 Configuration	xxx...xxx [If] <i>Response is character string defining units of measure from one of the following: Degrees-C; Degrees-F; RH/WB; or Linear Use command "UN2" to request Units of Channel 2 Configuration</i>
3 USE THESE COMMANDS TO REQUEST CONTROL LOOP INFORMATION FROM THE SELECTED 600/620:		
PR1 [cr]	read PROCESS VALUE for Channel 1	xxx.x [If] <i>Use command "PR2" to request Channel 2 Process Value</i>
PW1 [cr]	read POWER OUTPUT for Channel 1	xx.xx [If] <i>Response is as percentage of maximum Use command "PW2" to request Channel 2 Power Output</i>
SP1 [cr]	read SETPOINT VALUE for Channel 1	xxx.x [If] <i>Use command "SP2" to request Channel 2 Setpoint Value</i>
4 USE THESE COMMANDS TO REQUEST ALARM AND EVENT INFORMATION FROM THE SELECTED 600/620:		
AEV [cr]	EVENT STATUS Request	1...5•7•A...E•H [If] <i>Events that are "ON" are noted by identifying character; events that are "OFF" are noted by "•"</i>
ALM [cr]	ALARM STATUS Request	xxxxxxxx [If] <i>The response to this request is a character string that defines alarm status in the following order: S1: Channel 1 Setpoint Alarm; L1: Channel 1 Deviation Alarm S2: Channel 2 Setpoint Alarm; L2: Channel 2 Deviation Alarm When alarm condition is not in effect, the respective characters are replaced by "-"; e.g. S1 - - - L2</i>
CPI [cr]	read LATCHED inputs (on TB-5) and RESET	1.....8 [If] <i>Example response shows events "1" and "8" were "ON". After reading, both were reset</i>
RDI [cr]	read STATUS OF INPUTS at TB-6	1.....8 [If] <i>Example response shows inputs "1" and "8" are "ON"</i>

continued on next page 

Use these commands to monitor the current information in your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
---------	----------	-------

5 USE THESE COMMANDS TO REQUEST PROGRAMMER INFORMATION FROM THE SELECTED 600/620:

CPN [cr]	read Current PROGRAM Number	nn [lf]
CSN [cr]	read Current STEP Number	nnn [lf]
MOD [cr]	identify MODE OF PROGRAMMER	xxx [lf]
	<i>Response "xxx" is "RUN" (Run Mode) or "STP" (Stop Mode)</i>	
CTG [cr]	read CYCLES TO GO	nnnn [lf]
	<i>Response to this command will be "- - -" if EOP has not been reached</i>	
LTG [cr]	read LOOPS TO GO	nnnn [lf]
	<i>Response will show "- - -" if LOOP step has not been reached</i>	
TIM [cr]	read TIME REMAINING in Current Step.....	hh:mm:ss [lf]

IEEE488 OPTIONS

Refer to the back cover of this guide for a listing of additional IEEE488 instructions.

Use these commands to set or modify the PID tuning parameters of your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS AND PLACE THE SELECTED UNIT UNDER COMPUTER CONTROL:		
ADR [cr]	read the ADDRESS of the selected unit <i>Use this QUERY command if your installation has two or more 600/620s</i>	nn [If]
#nn	select the 600/620 ADDRESS	[no reply]
IFS	request INTERFACE STATUS <i>Control is either from the Front Panel ("LCL") or from your computer ("RMT")</i>	LCL [If] or RMT [If]
RMT SELECT [cr]	change to REMOTE mode (computer control) <i>To transfer control back to the 600/620 Front Panel, use the command LCL [cr]</i>	ok [If]
2 USE THESE COMMANDS TO ADDRESS (OR READ) A GROUP OF PID PARAMETERS:		
PID nnn [cr]	ADDRESS PID parameters <i>"nnn" is a three-character code as follows: 1st Character: the CHANNEL NUMBER (either "1" or "2") 2nd Character: HEATING or COOLING action (either "H" or "C") 3rd Character: UNSTAGED or STAGED GROUP (either "U" or "S") as illustrated in the following example: PID 1HU [cr] Select PID Channel 1, Heating Action, Unstaged Parameters</i>	ok [If]
PID [cr]	READ the active PID parameter selection <i>"nnn" is a three character code as described above</i>	nnn [If]
3 USE THESE COMMANDS TO SET THE PID PARAMETERS WITHIN THE SELECTED GROUP: (note: for a query, simply omit the "n" from the command)		
CTM n [cr]	set CYCLE TIME	ok [If]
PBN n [cr]	set PROPORTIONAL BAND <i>"n" is numerical value in current units</i>	ok [If]
PGN n [cr]	set PROPORTIONAL GAIN	ok [If]
INT n [cr]	set Integral (RESET) action <i>"n" is RESET value in repeats per minute</i>	ok [If]
RWI n [cr]	set RESET WINDUP INHIBIT <i>"n" is reset windup inhibit value as a percentage of proportional band</i>	ok [If]
UWF n [cr]	set UNWIND FACTOR <i>"n" is the UNWIND FACTOR (de-integration accelerator)</i>	ok [If]
ICP n [cr]	set INTEGRAL CLIP <i>"n" is integral clip value as percentage of stored integral to cut</i>	ok [If]
DER n [cr]	set DERIVATIVE action <i>"n" is the derivative action in minutes</i>	ok [If]
IDB n [cr]	set ID BAND <i>"n" is the dead band value with active rate and reset</i>	ok [If]
MNO n [cr]	set MINIMUM OUTPUT POWER <i>"n" is the minimum power output (ALWAYS ON) as a percentage of full power</i>	ok [If]
MXO n [cr]	set MAXIMUM OUTPUT POWER <i>"n" is the maximum power output as a percentage of full power</i>	ok [If]
4 USE THIS COMMAND TO RETURN THE SELECTED 600/620 CONTROLLER TO FRONT PANEL OPERATION:		
LCL [cr]	place selected unit under LOCAL control (Front Panel)	ok [If]

Use these commands to execute real-time control of setpoints and event outputs of your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS AND PLACE THE SELECTED UNIT UNDER COMPUTER CONTROL:		
ADR [cr]	read the ADDRESS of the selected unit	nn [If] <i>Use this QUERY command if your installation has two or more 600/620s</i>
#nn [cr]	select the 600/620 ADDRESS	[no reply]
IFS [cr]	request INTERFACE STATUS	LCL [If] or RMT [If] <i>Control is either from the Front Panel ("LCL") or from your computer ("RMT")</i>
RMT SELECT [cr]	change to REMOTE mode (computer control)	ok [If] <i>To transfer control back to the 600/620 Front Panel, use the command LCL [cr]</i>
2 USE THIS COMMAND TO PLACE BOTH CHANNELS OF THE SELECTED UNIT INTO THE MANUAL SETPOINT MODE:		
CH1 M [cr]	set Channel 1 Setpoint operation to MANUAL Mode	ok [If] <i>CH1 Setpoint is removed from Programmer Control Use the command "CH2 M" to place Channel 2 Setpoint operation under Manual control</i>
3 USE THESE COMMANDS TO READ THE STATUS OF EVENTS, PROCESS VALUES AND SETPOINTS:		
MS1 [cr]	read the MANUAL SETPOINT for Channel 1	xxx.x [If]
MS2 [cr]	read the MANUAL SETPOINT for Channel 2	xxx.x [If]
PR1 [cr]	read the current PROCESS VALUE for Channel 1	xxx.x [If]
PR2 [cr]	read the current PROCESS VALUE for Channel 2	xxx.x [If]
AEV [cr]	read the current EVENT STATUS	1•••5•7•A•••E••H [If] <i>Events that are "ON" are noted by identifying character; events that are "OFF" are noted by "•"</i>
4 USE THESE COMMANDS TO EXECUTE REAL-TIME CONTROL OVER SETPOINTS, EVENTS AND THERMOBOOST OF THE SELECTED UNIT:		
CM1 [cr]	clear the MANUAL SETPOINT for Ch 1 (Use "CM2" for Ch2)	ok [If]
MS1 nnn.n [cr]	set the MANUAL SETPOINT for Ch 1 (Use "MS2..." for Ch2)	ok [If]
CH1 % OUTPUT [cr]	set Ch1 to %OUTPUT (PCT) mode (Use "CH2..." for Ch2)	ok [If]
M%1 nnn [cr]	set nnn% output on Ch1 (Use "M%2..." for Ch2)	ok [If] <i>PCT OUTPUT mode must be selected</i>
MBD nn [cr]	set THERMOBOOST value for COOL action	ok [If]
MBI nn [cr]	set THERMOBOOST value for HEAT action	ok [If]
MA1 nn [cr]	set ALARM LIMIT for Ch 1 (Use "MA2..." for Ch2)	ok [If] <i>Limit defined is deviation from manual setpoint</i>
MEN n n [cr]	set specified events to "ON"	ok [If]
MEC [cr]	clear all MANUAL events	ok [If]
MEF n n [cr]	set specified events to "OFF"	ok [If]
5 USE THIS COMMAND TO RETURN THE SELECTED 600/620 CONTROLLER TO FRONT PANEL OPERATION:		
LCL [cr]	place selected unit under LOCAL control (front panel)	ok [If]

IEEE488 OPTIONS

Refer to the back cover of this guide for a listing of additional IEEE488 instructions.

▲ CONTROL PROGRAMMER

RUN, STOP (HOLD), RESET, ETC.

Use these commands to control operation of your 600A/620A Programmer – Run, Stop, Reset, etc. – from your computer or smart terminal.

COMMAND	FUNCTION	REPLY
1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS AND PLACE THE SELECTED UNIT UNDER COMPUTER CONTROL:		
ADR [cr]	read the ADDRESS of the selected unit <i>Use this QUERY command if your installation has two or more 600/620s</i>	nn [lf]
#nn [cr]	select the 600/620 ADDRESS	[no reply]
IFS [cr]	request INTERFACE STATUS <i>Control is either from the Front Panel ("LCL") or from your computer ("RMT")</i>	LCL [lf] or RMT [lf]
RMT SELECT [cr]	change to REMOTE mode (computer control) <i>To transfer control back to the 600/620 Front Panel, use the command LCL [cr]</i>	ok [lf]
2 USE THESE COMMANDS IF YOU WISH TO READ THE SELECTED PROGRAM AND STEP OR SELECT A SPECIFIC PROGRAM AND STEP:		
PRN [cr]	read the selected PROGRAM number	nn [lf]
STN [cr]	read the selected STEP number	nnn [lf]
PRN nn [cr]	select a PROGRAM number	ok [lf]
STN nnn [cr]	select a STEP NUMBER in the selected program	ok [lf]
3 USE THESE COMMANDS TO RUN A PROGRAM:		
RUN p [cr]	run PROGRAM "p"	ok [lf]
RUN p s [cr]	run PROGRAM "p" from STEP "s" <i>"s" must be a RAMP/SOAK (STD) step</i>	ok [lf]
4 USE THESE COMMANDS TO STOP (HOLD) OR RESET THE PROGRAM THAT IS CURRENTLY EXECUTING:		
STP [cr]	STOP (HOLD) the program that is executing	ok [lf]
RES [cr]	RESET the STOPPED program to STEP 1	ok [lf]
5 USE THESE COMMANDS TO OVERRIDE THE PROGRAMMED VALUES FOR THE CURRENT STEP: (NOTE: SEND COMMAND W/O DATA TO READ CURRENT VALUE)		
CS1 nnn[cr]	Change Current Channel 1 SETPOINT <i>Use "CS2..." to change Channel 2 setpoint</i>	ok [lf]
CA1 nnn[cr]	Change Current Channel 1 DEVIATION ALARM <i>Use "CA2..." to change Channel 2 deviation alarm</i>	ok [lf]
CCT hh mm ss[cr]	Change Current TIME REMAINING in Step	ok [lf]
CCE 1.....78A.....GH[cr]	Change the Current EVENTS <i>Note: all 16 events must be entered in proper sequence</i>	ok [lf]
CCL nnnn[cr]	Change Current LOOPS	ok [lf]
CCC nnnn[cr]	Change Current CYCLES	ok [lf]
CTI nnn[cr]	Change Current PROGRAMMED HEAT (Increase Thermal Boost)	ok [lf]
CTD nnn[cr]	Change Current PROGRAMMED COOL (Decrease Thermal Boost)	ok [lf]
6 USE THIS COMMAND TO RESUME EXECUTION OF THE PROGRAM:		
RUN [cr]	RESUME execution of program <i>PROGRAM # and STEP # must have been previously selected</i>	ok [lf]
7 USE THIS COMMAND TO RETURN THE SELECTED 600/620 CONTROLLER TO FRONT PANEL OPERATION:		
LCL [cr]	place selected unit under LOCAL control (front panel)	ok [lf]

Use these commands to transfer programs and tuning values between your computer and your Model 600A/620A Environmental Chamber System Controller.

C O M M A N D	F U N C T I O N	R E P L Y
1 USE THESE COMMANDS TO FIRST SELECT THE 600/620 YOU WISH TO ADDRESS AND PLACE THE SELECTED UNIT UNDER COMPUTER CONTROL:		
ADR [cr]	read the ADDRESS of the selected unit <i>Use this QUERY command if your installation has two or more 600/620s</i>	nn [If]
#nn	select the 600/620 ADDRESS	[no reply]
IFS [cr]	request INTERFACE STATUS <i>Control is either from the Front Panel ("LCL") or from your computer ("RMT")</i>	LCL [If] or RMT [If]
RMT SELECT [cr]	change to REMOTE mode (computer control) <i>To transfer control back to the 600/620 Front Panel, use the command LCL [cr]</i>	ok [If]
2 USE THESE COMMANDS IF YOU WISH TO SAVE (UPLOAD) PROGRAMS AND PID PARAMETERS TO THE COMPUTER:		
ULP n [cr]	save PROGRAM "n" from the selected unit <i>The data for program "n" is represented by "xxxxx...xxxx"</i>	*xxxxx...xxxx\ [If]
ULD P [cr]	save ALL PID PARAMETERS from the selected unit <i>The PID data is represented by "xxxxx...xxxx"</i>	xxxxx...xxxx ok [If]
ULD S [cr]	save the TOTAL PROGRAM MEMORY from the selected unit <i>The data for all 200 steps of program memory is represented by "xxxxx...xxxx"</i>	xxxx...xxx [If] [If] ok [If]
3 USE THESE COMMANDS IF YOU WISH TO RESTORE (DOWNLOAD) PROGRAMS OR PID VALUES TO THE SELECTED 600/620 CONTROLLER:		
DLP nn [cr] xxxx...xxxx [cr]	Load PROGRAM "nn" <i>"xxxx...xxxx" represents the data for Program "nn" previously saved using the "ULP nn" command</i>	ok [If]
DLD P [cr] xxxx...xxxx [cr]	Load PID Parameters <i>"xxxx...xxxx" represents the PID data previously saved using the "ULD P" command</i>	ok [If]
DLD S [cr] xxxx...xxxx [cr]	Load TOTAL PROGRAM MEMORY (all 200 steps) <i>"xxxx...xxxx" represents the total program memory previously saved using the "ULD S" command</i>	ok [If]
4 USE THIS COMMAND IF YOU WISH TO VERIFY A PROGRAM IN THE MEMORY OF THE SELECTED 600/620 CONTROLLER:		
VFP nn [cr] xxxx...xxxx [cr]	VERIFY Program "nn" <i>"xxxx...xxxx" represents the data for Program "nn" previously saved using the "ULP nn" command</i> <i>Response is *ok [If] if verification is successful; otherwise response is *? [If]</i>	*ok [If] or *? [If]
5 USE THIS COMMAND TO RETURN THE SELECTED 600/620 CONTROLLER TO FRONT PANEL OPERATION:		
LCL [cr]	place selected unit under LOCAL control (front panel)	ok [If]

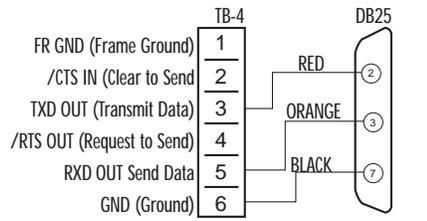

▲ IEEE-488 COMMAND SET

Use these commands to perform the specified IEEE-488 operations in connection with your Model 600A/620A Environmental Chamber System Controller.

COMMAND	FUNCTION	REPLY
RQN [cr]	ENABLE IEEE488 service request	ok [If]
RQD [cr]	DISABLE IEEE488 service request	ok [If]
SRN n n [cr]	enable individual SRQ MASK BIT	ok [If]
	<i>The SRQ bits are assigned as follows:</i>	
	<i>Bit 0: Deviation Alarm Channel 1 or Channel 2</i>	<i>Bit 1: Event F (OFF to ON Transition)</i>
	<i>Bit 2: Setpoint Alarm Channel 1 or Channel 2</i>	<i>Bit 3: Input at TB-6, Pin #8</i>
	<i>Bit 4: Channel 1 Process Limit</i>	<i>Bit 5: Channel 2 Process Limit</i>
	<i>Bit 6: Serial Poll (Set Anytime SRQ Issued)</i>	<i>Bit 7: Unused</i>
SRS [cr]	read IEEE488 SRQ mask status register	1 ••4 •••• [If]
	<i>See above for SRQ bit assignments</i>	
SRS •1•3•5•• [cr]	store image of the total SRQ mask	ok [If]
	<i>All 8 bits are stored at the same time</i>	
SRC [cr]	clear enabled SRQ mask bits	ok [If]
GTL [cr]	go to local	no reply
DCL n [cr]	clear device	no reply

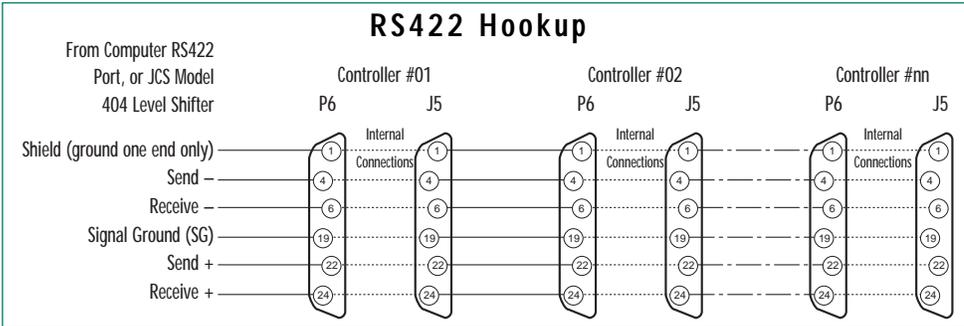

▲ HOOKUP DIAGRAMS

RS232-C Hookup (Null Modem)

When using a modem cable, swap the wires going to TB4-3 and TB4-5

RS422 Hookup
